The Japanese pond turtle (also known as the Japanese stone turtle) is an aquatic turtle found in the freezing fast-flowing waters of Kyushu, Shikoku, and Honshu. It is known as ishigame in its native Japan. They can also be found in cool ponds and streams, as well as man-made water features like irrigation ditches and canals.

This turtle species' ability to hibernate at the bottom of ponds and streams is an intriguing adaptation. You're probably wondering how they breathe down there, and the answer is that they don't. With the help of their tail, they actually absorb oxygen from the water.
